

ISU KLM Meeting

September 19/20

Noah Brenny

Update

- Spoke with Sourav about integration of bubbler boards into network
 - Seems that we need some sort of process running on klmipc computer to convert our “PV”s to the compatible form of PVs for b2nsm
 - Necessary for archiving
 - Not clear to me if this is necessary for monitoring
 - Do the existing GUIs read PVs from the archiver, or do they read “live” PVs?
 - Expect to hear more about this in the Belle II KLM meeting later today/tomorrow

For next week

- Will work on GUI more this week
 - detector-like appearance
 - PV names and Pi location information
