November 29
ISU KLM Meeting

NOAH

Update

- Moved reboot scripts to klmhv01 from Sourav's recommendation
- Added script to reboot N Pis, rather than all 16 at once
- Adding some "transportability tools"
  - Script to generate keys for all pis for password-less logins
  - Script to bookkeep ip addresses
    - In anticipation for KLM private network

- Worked with Nakao-san to use a new method to assign IP addresses
  - Successful (IPs persist through reboots, was not the case before)
- Checked in with Seokhee about inability to see PVs
  - This is a priority for me
- This week maybe we can work on proper power connections at the panels as suggested by Sumisawa-san
