

Trigger Slow Control

Cheolhun Kim
Hanyang University
Korea

[General]

- GDL, GRL/CDC, and ECL are included in TRG RC and we have experienced some problems during Phase III.
- Many of them are solved and TRG SLC has been stabilized, but some more update is required for TRG expert shifts to easily operate.

[Solved]

- nsmd2 updated for the comparability with the latest daq_slc version
- Experimental parameter recording by run
 - Sometimes not recorded well due to the daqdbprovider process
 - Solved after applying Mikhail's pull-request (#130: Bugfix/daqdbprovider thread safety)
- KLM TRG is included in TRG RC scheme during phase III
 - KLM TRG ready signal is not included in the TRG ready signal, yet (because it always NOTREADY, currently.).

[Under consideration]

- TOP TRG
- Initialization via SLC TRG main panel
 - TRG experts are frequently confused.
- Configuration DB to Condition DB conversion
 - It seems there is no official way to convert
- GIT / cvmfs related: not much progress

Sub-TRG	RC	Archiver	Conf. DB	Ready sig.	Person in charge
GDL	O	O	O	O	T. Koga & H. Nakazawa
GRL/CDC	O	O	O	O	Y. T. Lai
ECL	O	O	O	O	E. J. Jang & C. H. Kim
TOP	X	X	X	X	Savinov Vladimir
KLM	O	O	O	X	D. Liventsev
Neuro	X	X	X	X	S. Baehr

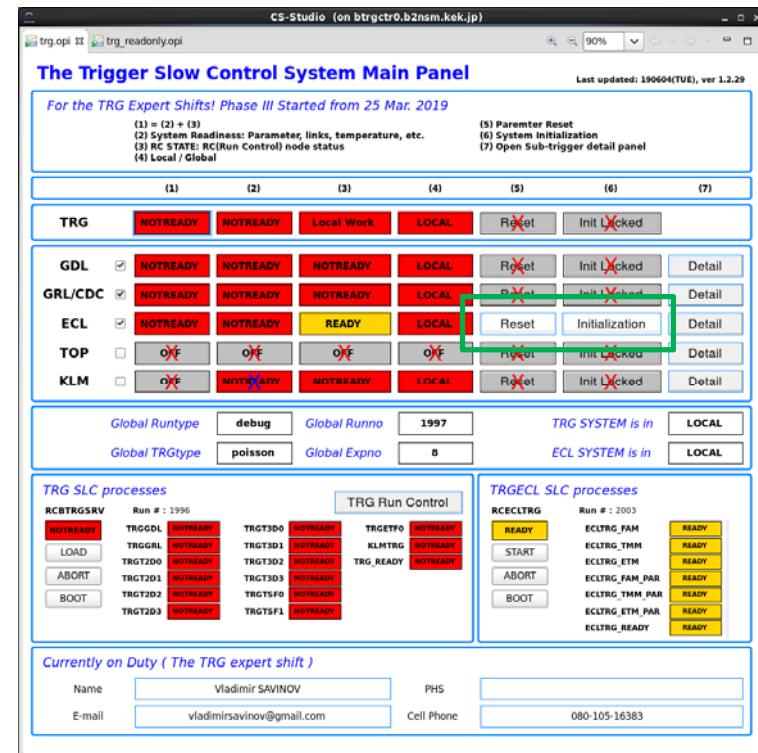

Initialization via TRG SLC main panel

< When the **SLC problem** happens >

- Because SLC itself shows problem in this case, the initialization button does not work properly (**the progress bar stucked**).
- SLC reboot with 'slctr reboot'
- Initialization button again
- TRG(ECL) is recovered.

< When a real TRG ECL problem happens >

- Initialization / Reset works in this case
- TRG(ECL) is recovered.

- Right procedure
 - Try ‘slctr reboot(recover)’ first
 - Click the initialization button
- Unfortunately, there is no module(a code) to let expert shifts to distinguish the type of the problem, currently.
- It would be better to just have a script to initialize TRGECL, first(not through SLC would be more stable).
 - I will just deactivate the initialization button (for a while) to avoid the confusion.

TRG SLC & RC & Archiver & Conf. DB

[Update log]

2019/06/17: New nodes, logcollectord (CHK)

2019/02/03 : status updated, partially prepared, person in charge, etc (CHK).

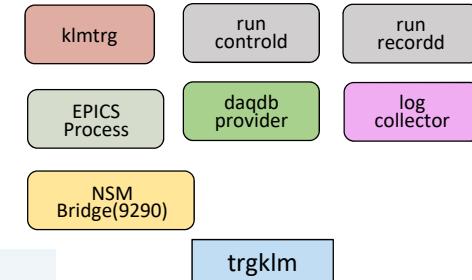

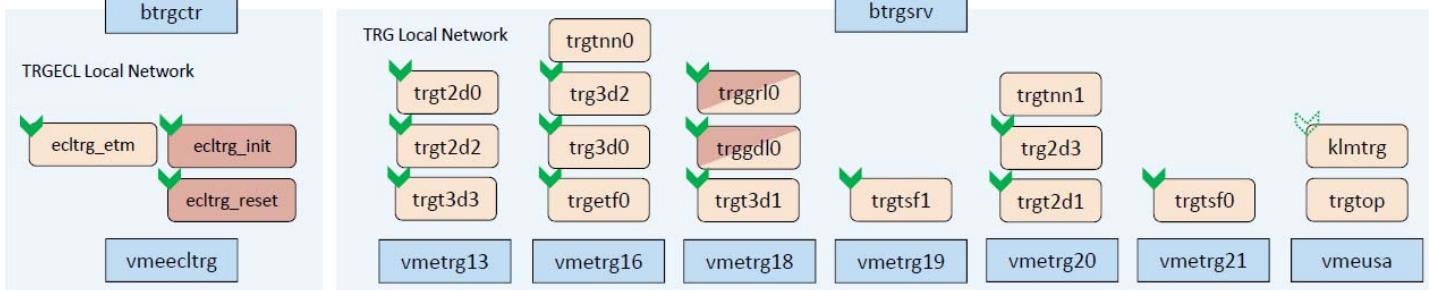

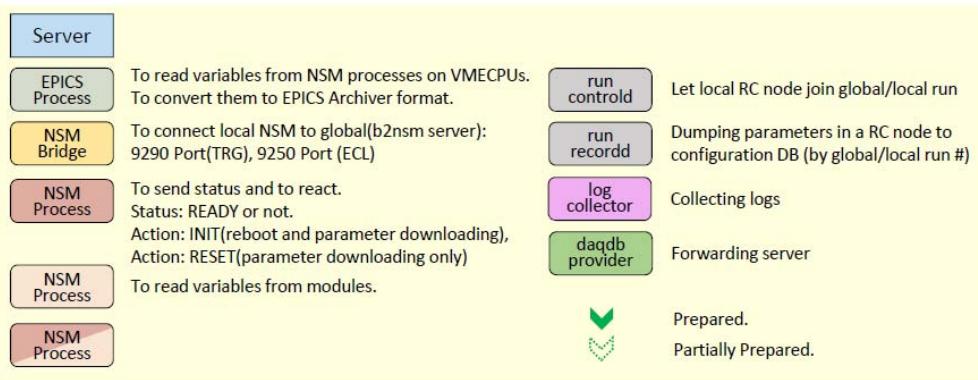

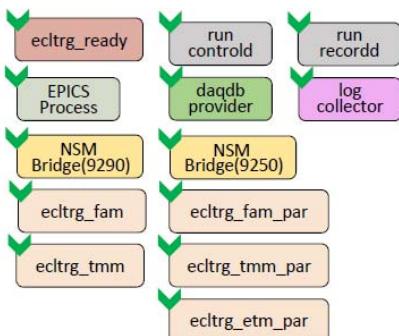

2018/11/21 : runcontrold, runrecordd (CHK)

2018/10/15 : TRGECL added (CHK)

2018/10/05 : SC added (YI)

2018/10/04 : Second version (YI)

2018/10/04 : First version (YI)

Due to the way how TOP TRG operate, the **trgkilm** server should have same structure as **btrgctr** / **btrgsrv**.
Not just add a node on **vmeusa** (full SLC setting on **trgkilm** server is neccesary).

- TRG rebooting script
 - Make it easier (including initialization)
 - Integrating scripts on btrgctr and btrgsrv
 - Include TRG SLC script in the Belle II whole SLC rebooting script (?)
- Add neuro related node
- TOP TRG SLC whole setting
- Version management
 - GIT / cvmfs
- TRG SLC is now on ‘usable’ level, but not that good enough.

Too complicated (only for the real expert)	only for trained experts	usable	quite good	Good enough
---	--------------------------	--------	------------	-------------

※ PV lists: <https://confluence.desy.de/display/BI>List+of+Archived+PVs>

- TRGECL (on btrgctr server)
 - ~ 55 k
- Other (on btrgsrv server)
 - ~ 3 k

- T. Koga-san, H.Nakazawa-san and Y. T. Lai
- RC nodes are well established
 - READY signals are prepared.
- Well developed GUIs
- Configuration DB recording
 - daqdbprovider problem 1 or 2 times per a 1 or 2 day
- ~ 1500 PVs are archived.
- DQM is prepared by T. Koga

- E.J. Jang & C.H. Kim
- RC nodes are well established
 - A READY signal is prepared.
- Well developed GUIs
- Configuration DB recording
 - No daqdbprovider problem.
- ~2000 PVs are archived.
- DQM is prepared by I.S. Lee

- Savinov Vladimir
- No RC node
 - No READY signal.
- No detailed GUIs, yet (not urgent).
- No configuration DB recording.
- **16 PVs are archived.**
- No DQM

- Dmitri Liventsev
- A RC node “KLMTRG” is prepared.
 - Always shows NOTREADY, though. Need to be updated.
- No detailed GUIs, yet (not urgent).
- Configuration DB recording
 - daqdbprovider problem 1 or 2 times per a 1 or 2 day
- 4 PVs are archived.
- No DQM
