June 20 KLM Meeting

Noah Brenny

Update

- Adapting IOC code from Hao Yin
  - Gives PVs which apparently make it easy for Avinash to integrate with the Archiver
  - PVs transferrable over ethernet connection which we have established
  - Need to update code to give deterministic values rather than random ones
  - Then, trim unnecessary bits and integrate it with Sayan's Pi code that give flow rate
  - Hope to have a working program by next week's meeting

PV: EPICS process variable
IOC: Input output controller
